

Every day planning for people in need
of cognitive support

<https://www.wellbee.app>

Wellbee App

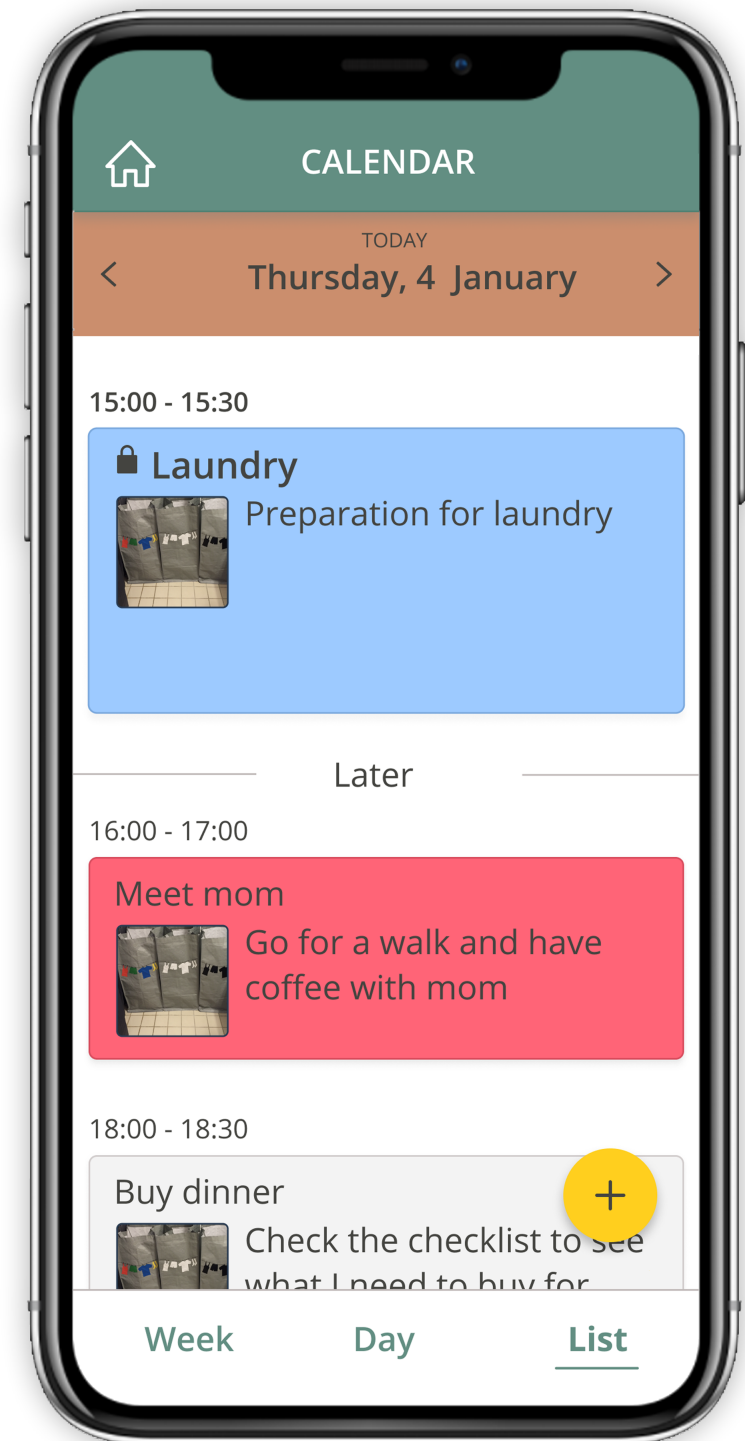

In Wellbee the users can take part of functionality such as calendar, checklists, clothes according to weather, contact list, QR-reader and photo diary - all this to enable every day tasks.

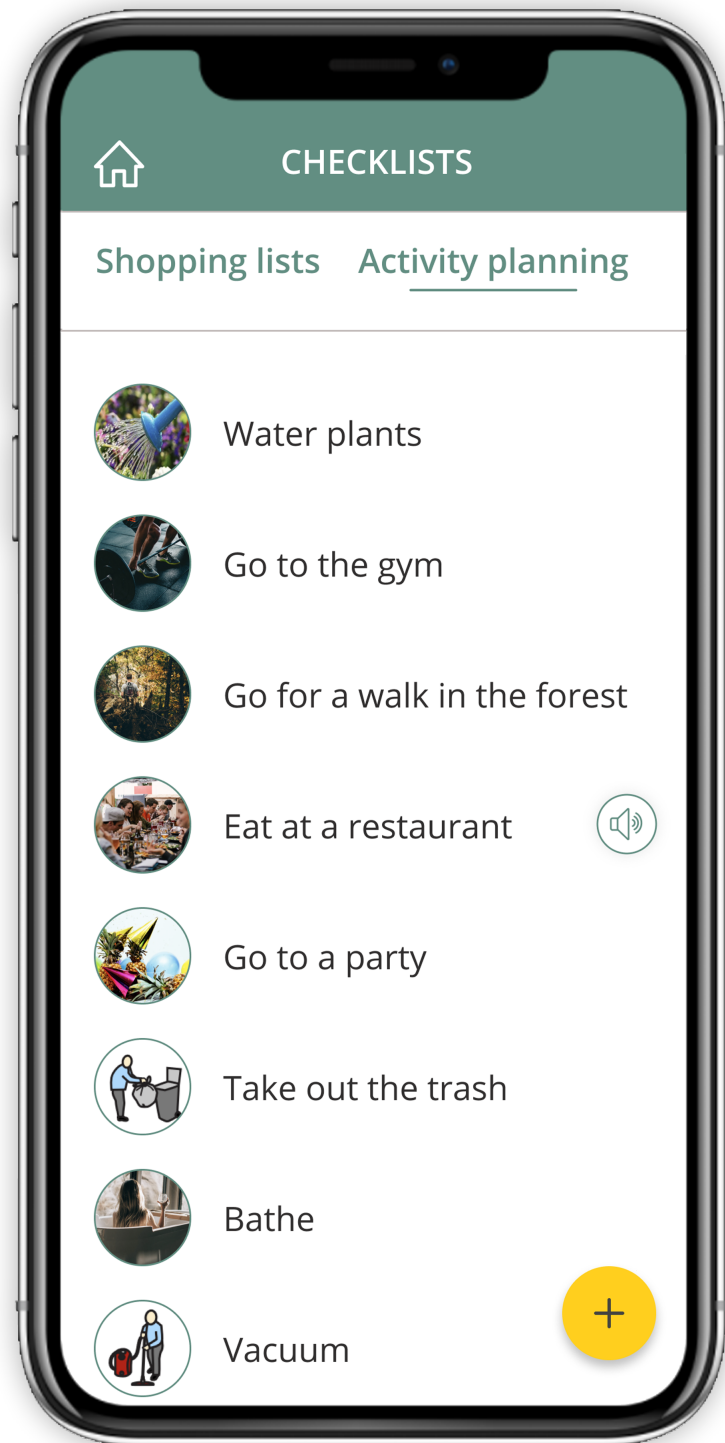

All parts can be customized in different ways to fit each user according to his or her needs. Adjustments are done with sound files, image/video, color coordination etc. Functionality can also be turned on and off depending on what the user needs.

Calendar

In the calendar, the user can see their planned activities in list view, day view or week view. To customize activities, the following sub-functions can be used for an activity:

- Sound
- Picture / video
- Symbolic clock
- Reminder
- Color coordination
- Connect to a checklist
- Make activity private
- Recurring activity

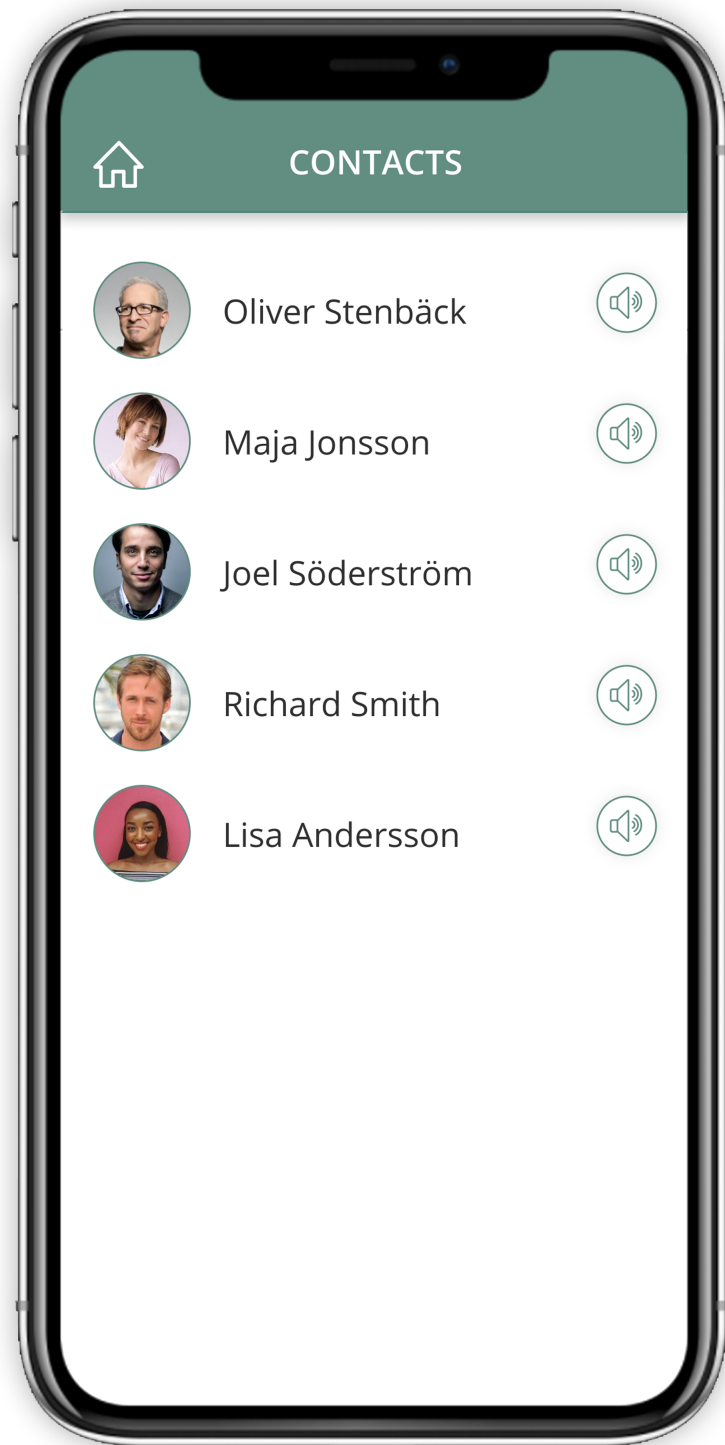

Checklists

Wellbee offers shopping lists and activity planning lists. To each list and list items, sound and image or video can be added. This is to personalize the content so that each user can access the information in the way that is best suited for them.

Clothes according to weather

With clothes, the user can see what type of clothing is suitable to wear at the moment. Depending on the prevailing weather, a special image is displayed along with the current temperature. It is possible to post their own pictures linked to certain weather.

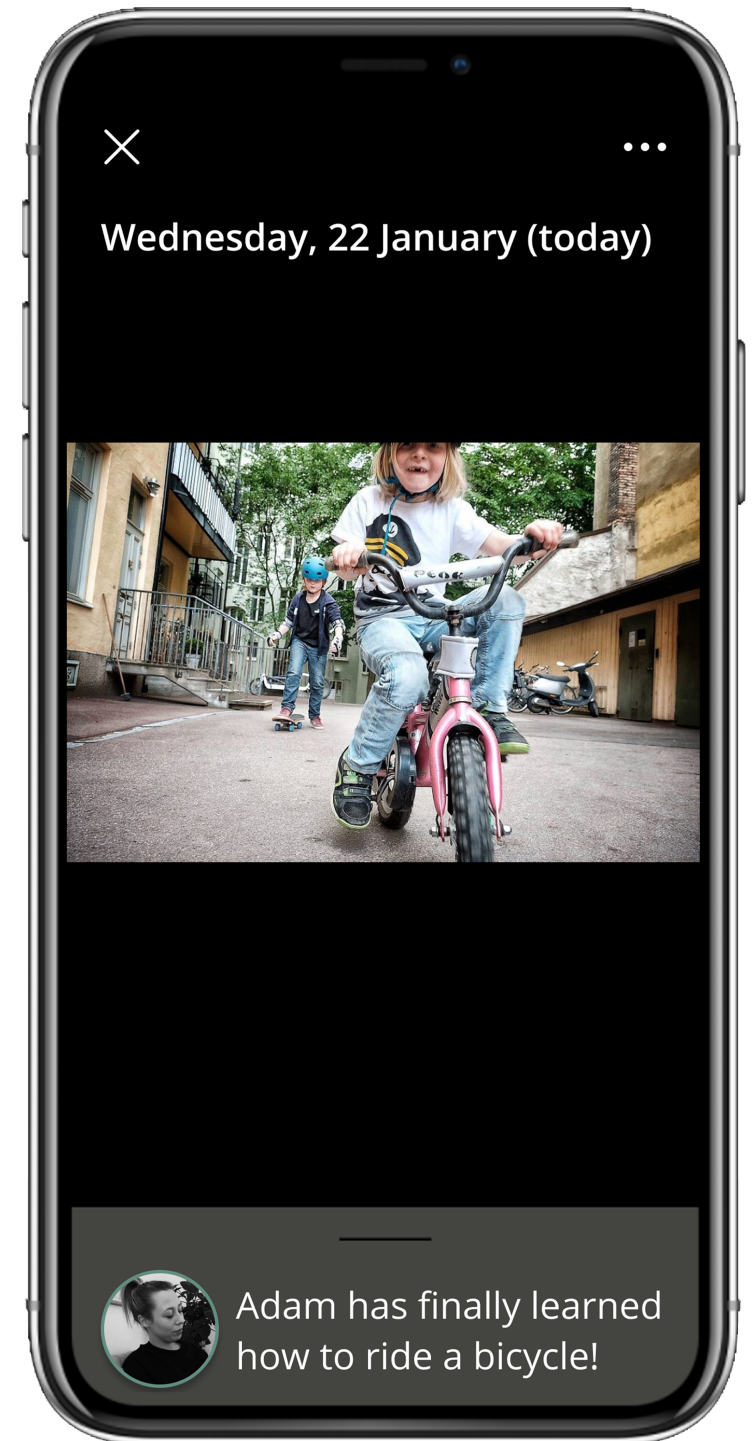

Contacts

In contacts, the user can see their contacts, which have been created and added from the planner web. It is possible to call, text, skype and email from this view.

All these contact paths are connected to the phone's own functions. Thus, the user is further navigated to built in mail client in the phone if choosing email in the contact list.

Photo diary

In Wellbee's photo diary, the user can upload pictures with related text. Even a relative/planner can upload photos. Simply as a joint photo album!

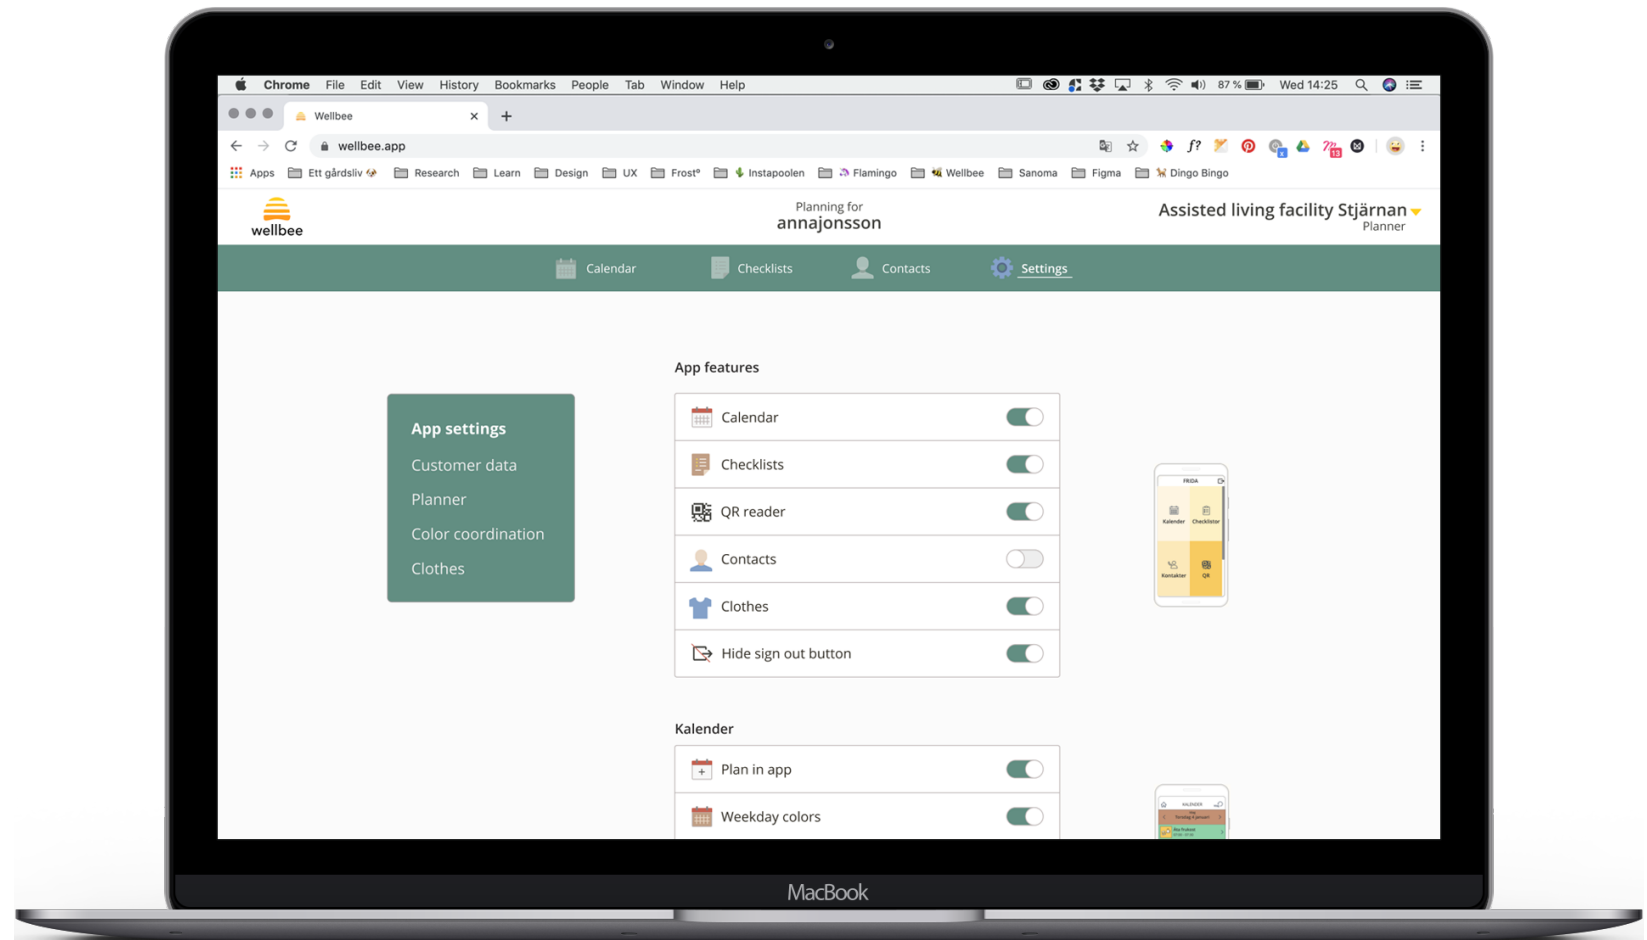

QR reader

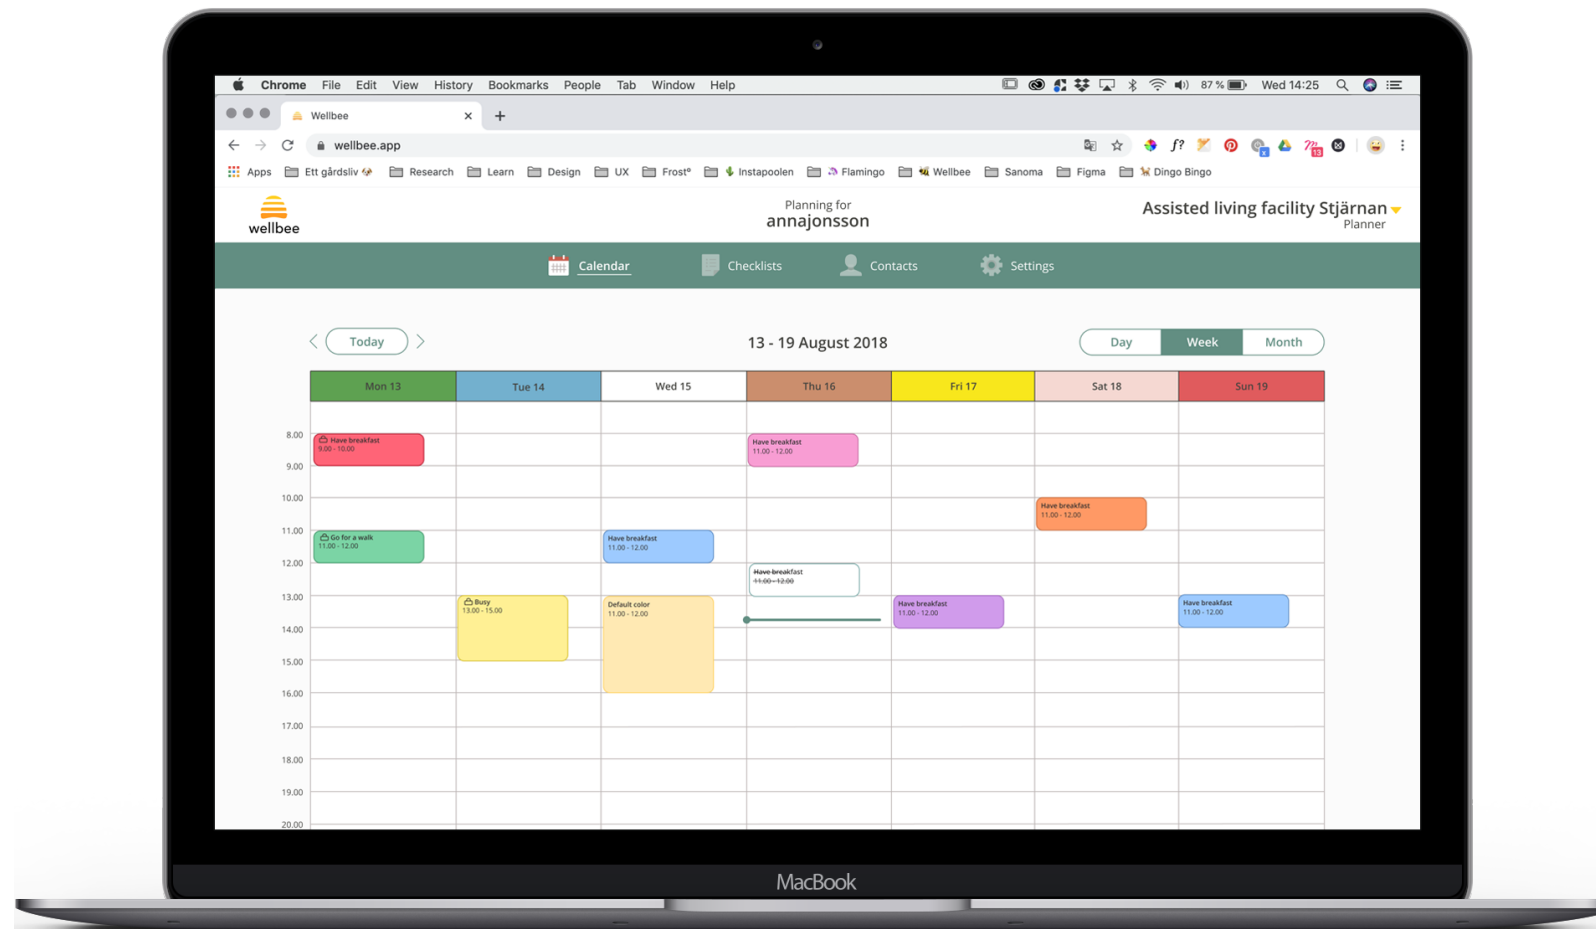

With the QR reader the user's camera is opened and scans the QR code. This was mainly built for municipalities and companies to use QR codes to give visitors information on how to do, for example in the public swimming pool.

Wellbee Web

On the so-called planner web, all the settings that affect the app are made. Functions can be set on and off and various adjustments can be made to customize the app's content to the current user.

In addition to settings, there are also calendars, checklists and contacts on the web. This is also where new planners can be added.

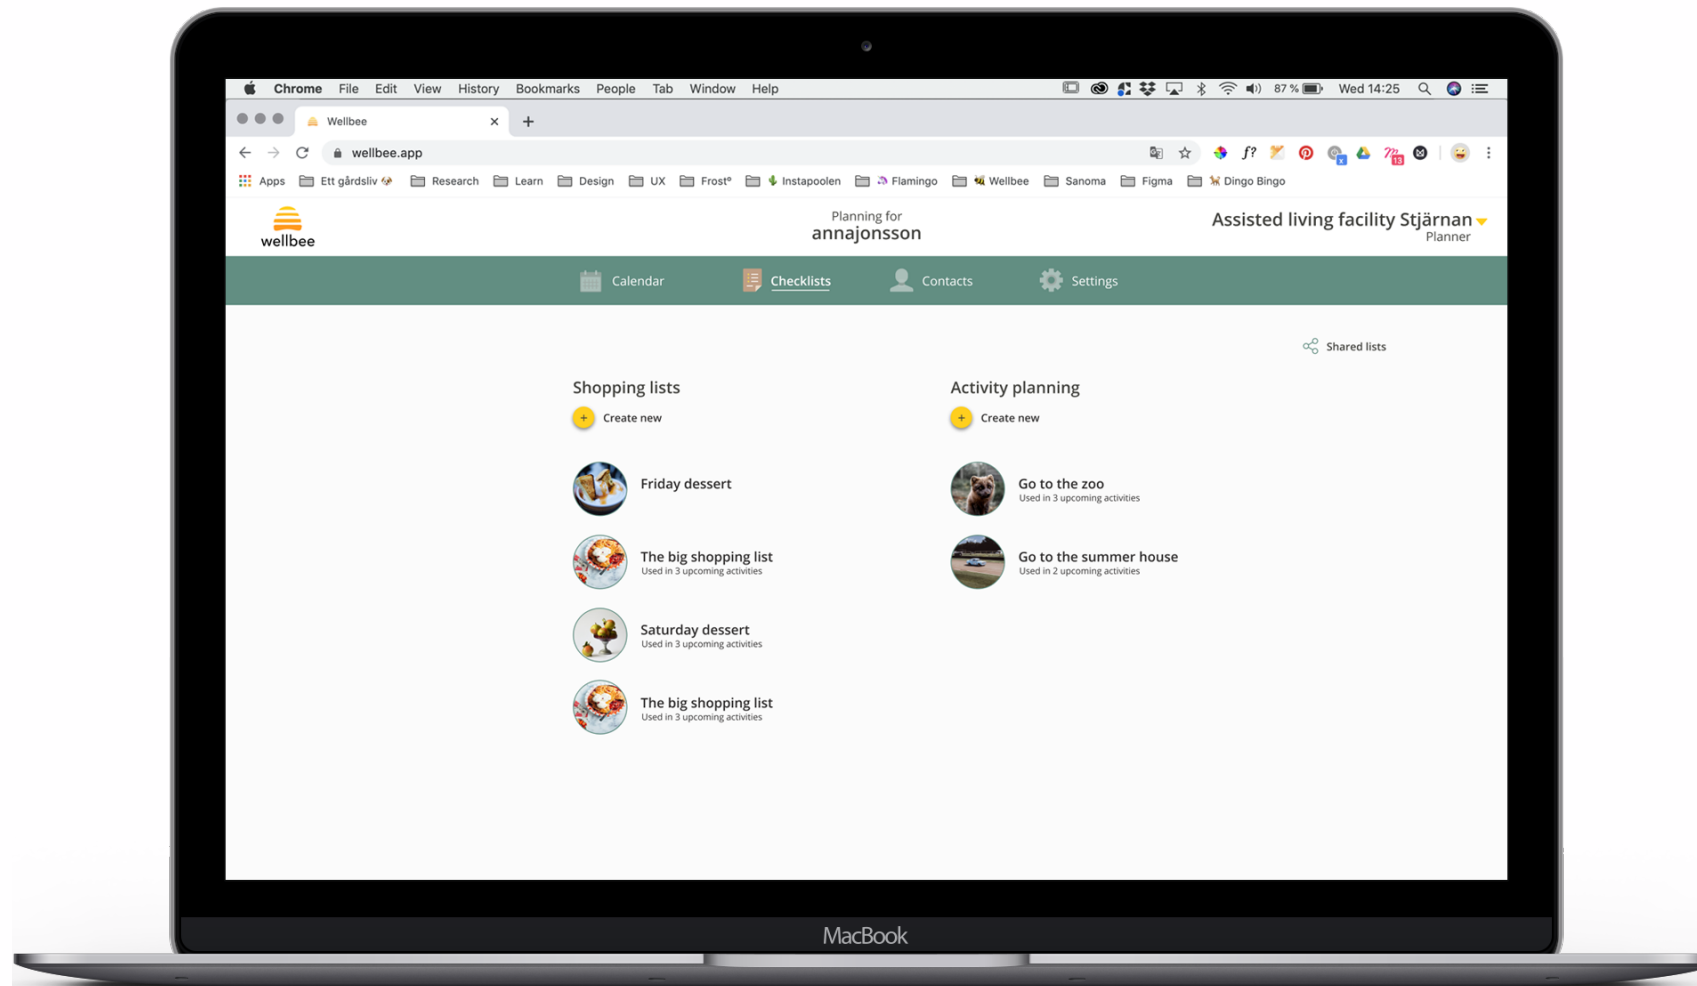

Calendar

The calendar view shows planned activities and it is from here the planner creates, changes and removes activities. Among other things, you can create and use activity templates. These are especially suitable for recurring activities but which may not recur so often that they should remain in the calendar on an ongoing basis.

To customize activities, the following sub-functions can be used for an activity:

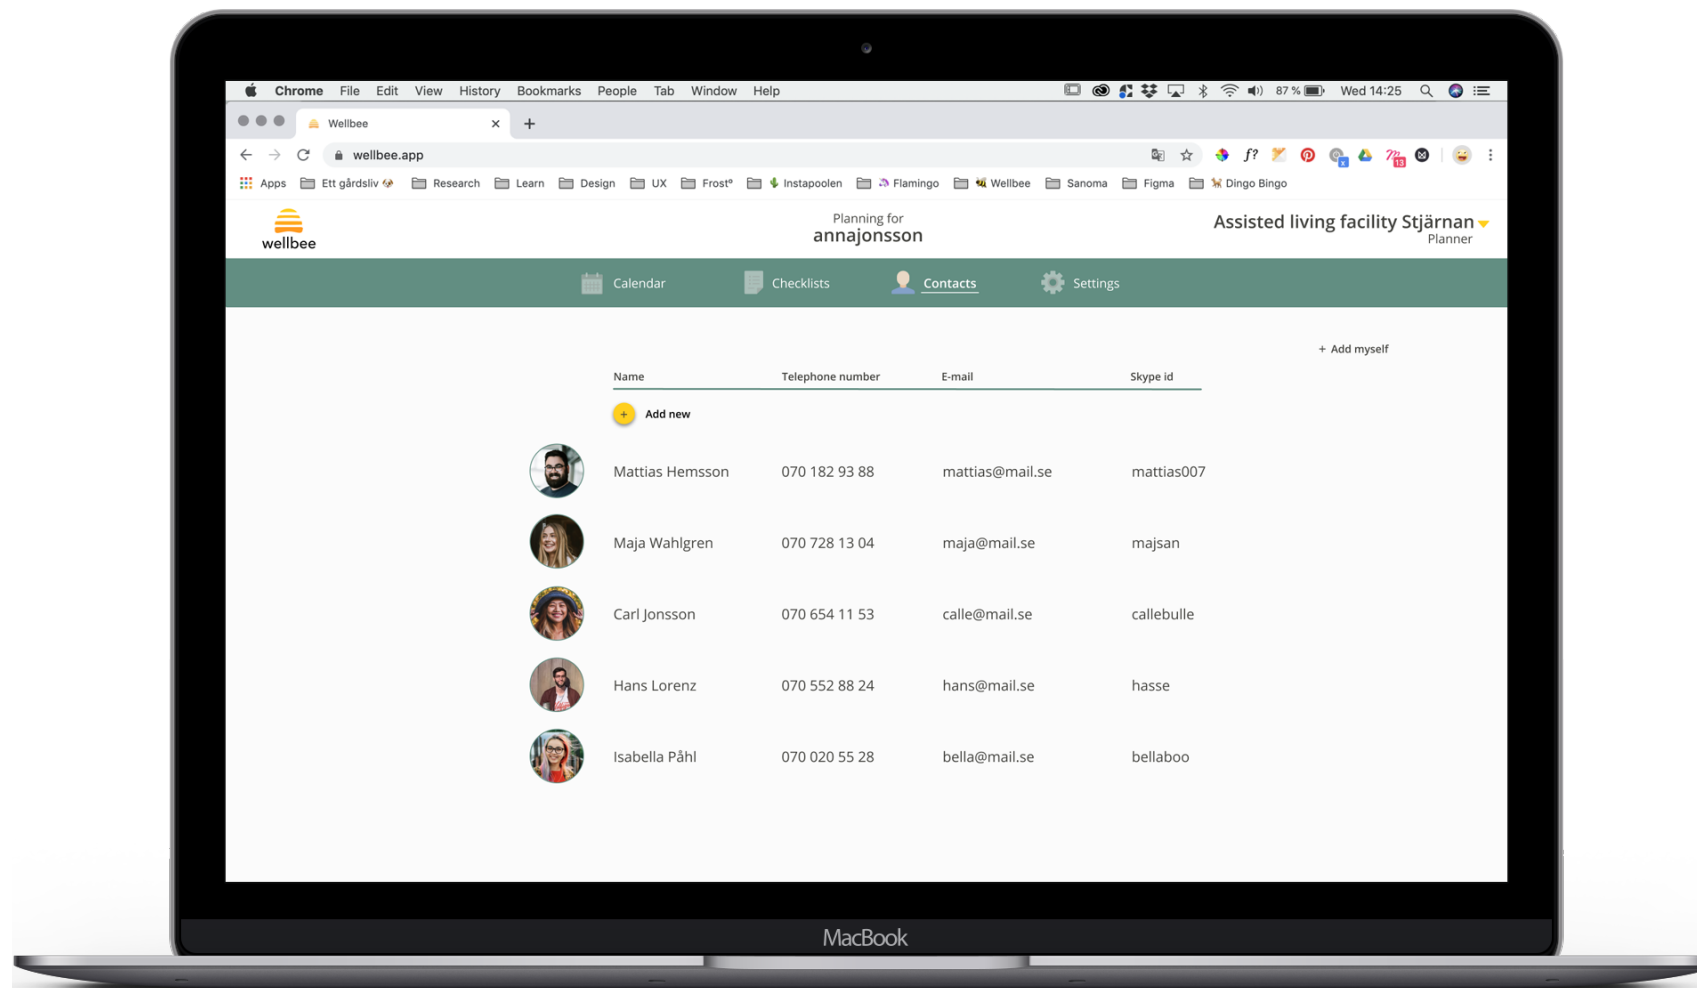

- Sound
- Picture/video
- Symbolic clock
- Reminder
- Color Coordination
- Connect to a checklist
- Make activity private
- Recurring activity

Checklists

Under checklists, activity plans and shopping lists are created, updated and changed. To each list and list items, sound and image or video can be added. Prices can be entered for list items on shopping lists.

Also, its possible to share checklists among an organization.

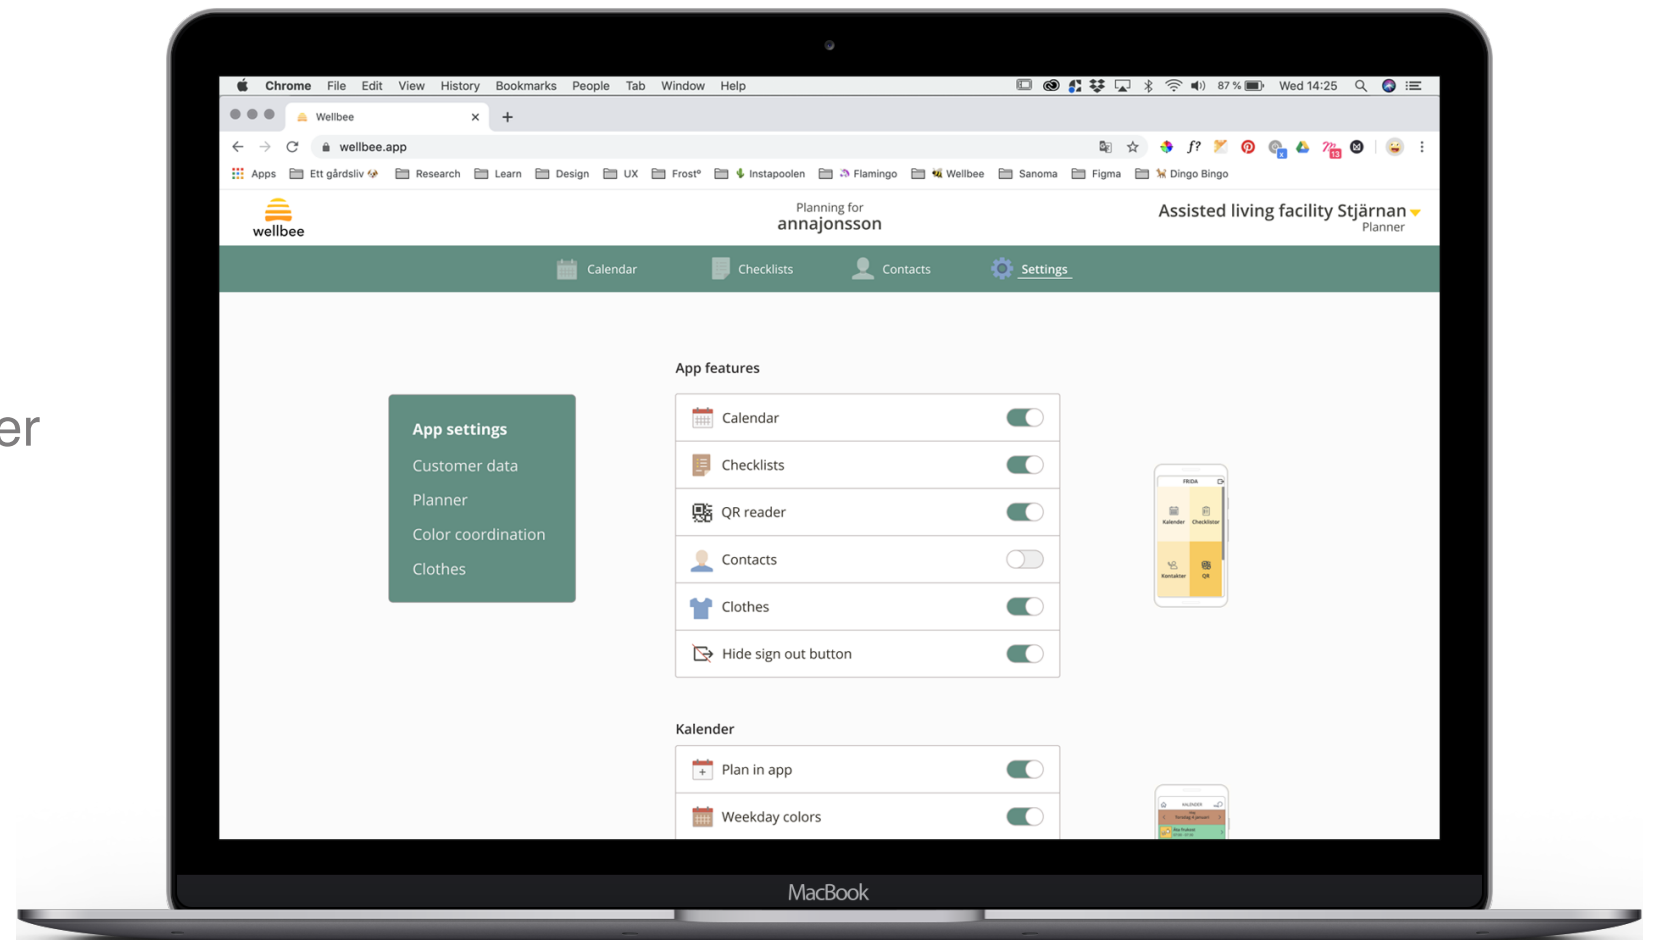

Contacts

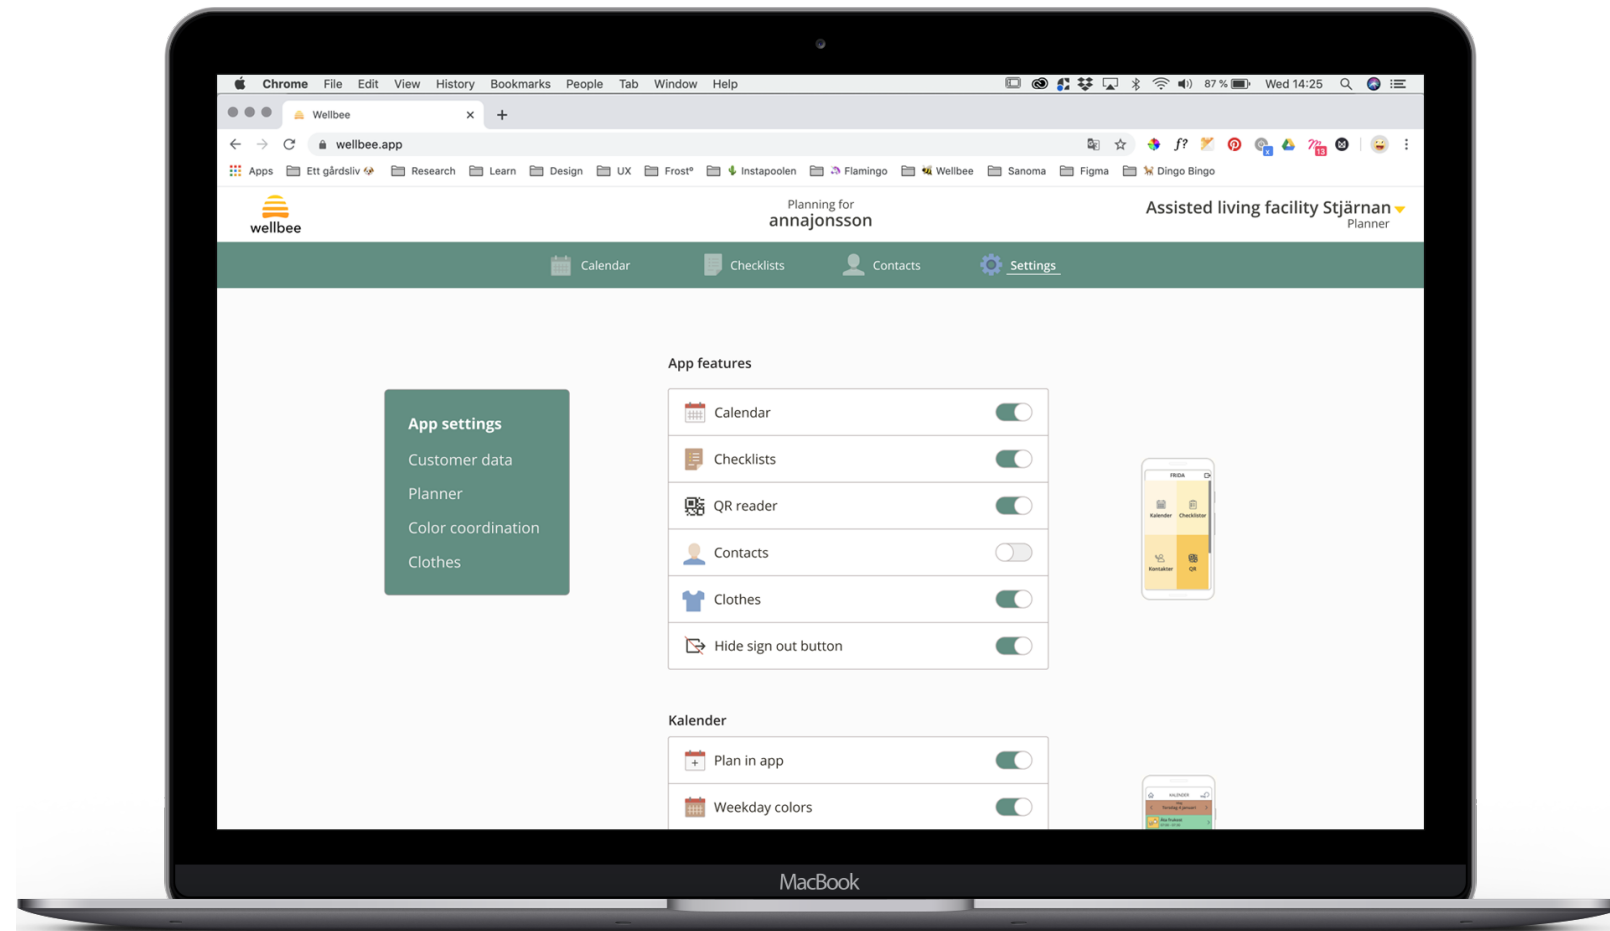

Here, the user's contacts are created and updated. The planner can enter telephone numbers for calling and texting, skype and email to a contact together with profile picture and name.

Settings

In settings, all the adjustments make the app as personalized as possible. The following parts are available under settings:

- App settings
- Color Coordination
- Planners
- Clothes after weather

In **app settings**, you select which features the user should have in their app. These functions are calendar, checklists, video calls, photo diary, contacts, QR readers, clothes according to weather and whether the sign out button should be hidden. The planner can also select which symbolic clock (or none at all) to be seen in activities and whether the user should have weekday

colors, color coordination and if they should be able to plan for themselves via the app.

The **color coordination** page creates color labels that can then be put on activities to show, for example, what activities the user needs support for, are independent in, what takes or gives energy.

Planners can be removed, added and changed for access under the menu section with the same name.

Clothes according to weather can be customized with your own images if the standard images do not suit the user.
